Projects

Gym Booking App *(React Native, Firebase | Live on Play Store and apple store)*
- Built for gated communities where gyms were often overcrowded and unmanaged.
- Designed and developed an app that tracks who's using the gym, when, and for how long — including break times.
- Helps **400–500 users daily**, giving the community better visibility and control over gym usage (play store)

School Attendance & Management App (React.js + FastAPI |In Beta testing now)
- Built to replace manual processes in schools for attendance, fee receipts, and result sharing.
- Teachers can take attendance, upload results, and send notifications — all from a simple dashboard.
- Admins have full control of student and fee data via a FastAPI-powered backend.
- Made for around **200-300 daily users** as per client.(API link)

Dynamic Weather App *(React.js, Tailwind CSS, OpenWeather API)*
- Created this as both a personal project and a teaching tool — to simplify weather data into a clean, responsive UI.
- Displays live weather updates using OpenWeather API with a minimal, user-friendly interface.
- The YouTube tutorial I made for it has helped over 37,000 people learn to build similar apps.(Dynamic Weather app tutorial)

AI-Powered Discord Bot *(Discord.js, Groq API using LLaMA 3.07)*
- Designed to automate moderation and user interaction in Discord communities.
- Uses AI to answer user questions and flag inappropriate messages in real-time.
- A helpful companion in channels needing smart moderation and engagement.

Work Experience

RudeLabs (Internship, Remote) *March 2023 - January 2024*   **Full Stack Developer**
- Built AI-driven web and mobile apps using **React Native** for real-world testing.
- Developed a reliable **PHP backend** for a billing system.
- Created fast **front-end prototypes with Vite** for faster client feedback.
- Gained hands-on experience with cross-team collaboration.

RudeLabs (Job, Remote) *March 2024 -May 2025*   **Fullstack Software Engineer**
- Developed a trading app for financial markets with real-time data.
- Built a gym tracker app used by **400–500 users** daily.
- **Reached 40K+ learners on YouTube** with React tutorials.
- Developed React Native apps and deployed them.
- Turned vague product ideas into working features with marketing/content teams.
- Built clean, **responsive UIs in React.js** alongside design and backend teams.

Skills

- **Frontend:** React.js, React-Native (Expo Mobile App devlopment), Next.js, TypeScript, Tailwind CSS, shad-cn, Framer-motion, HTML, DOM
- **Backend:**Express.js (Node.js), FastAPI (Python), Firebase, Supabase, REST APIs, Docker, JSON
- **Database:** PostgreSQL, MySQL, MongoDB (NoSQL), Firebase, Supabase
- **Cloud:** AWS-EC2/S3, Render, Railway, AWS-Beanstalk, Coolify(management), Supabase, VPS management
- **VersionControl:** Git
- **AI-Tools:** Claude.ai, ChatGPT.ai, Cursor.ai, Github copilot, Agentic AI, **Extras:** framer, wordpress, UX design
- **Testing:** jest, pytest **State management:** Redux and Redux toolkit, **CI/CD**: Github actions
